

SPINPRO

6-VOLT SOLAR CHARGER

INSTALLATION INSTRUCTIONS

- 1. Connect the RED (+) wire clip of the Solar Charger to the Positive (+) terminal on your rechargeable battery. IMPORTANT: Only a RECHARGEABLE type 6-volt battery can be used.**
- 2. Connect the BLACK (-) wire clip of the Solar Charger to the Negative (-) terminal on your rechargeable battery.**
- 3. Mount the charger (glass) panel face up exposed to sunlight.**

Your Spinpro Solar Charger is now fully functional! It will constantly charge your battery in any light condition. Direct sunlight is not required, however maximum charging power is obtained when the charger panel is exposed to full sunlight.

MOUNTING:

It will be necessary to cut a small notch in the bottom of your feeder enclosure to allow the Solar Charger wires to exit the feeder.

The Solar Charger Panel can be secured to your feed container or support bracket using any method you find acceptable. Spinpro does not supply mounting brackets and hardware.

CAUTION: Solar Charger produces electricity. Do NOT drop, crush, immerse in water, or attach to any part of persons or animals. Clean charger with a soft cloth and glass cleaner.
